Subject: RE: EPA Region 4

Categories: Filed by Newforma

Not sure about de-facto approval when it comes to Region 4 – they seem to be behind on most technologies, but we can try this with Brian and see how it goes. It is also not the best time to be dealing with them on any issues where they might need to go beyond their comfort zone. The literature review will still be needed for this and for the response to the comment.

Hi Jim,

According to Sandy Britt, the ASTM Standard is de-facto approval for EPA. He included a “Dear Regulator” letter (attached) that we could send to Brian Bastek. The ASTM standard is D7929-14. The letter includes multiple references, which I will try to find in preparation of our literature summary.

Thanks,
Regan
